Abstract

Geoethics cases are natural and social disasters that involve the consideration of stories, models, facts, ethics, dilemmas, and outcomes. These are recent episodes of case studies. Modern case studies are more important than ever and can be used to frame important discussions about the nature of demand-side protection. Some of the issues we discuss include: the history of geoethics; the evolution of the natural and social disaster; the nature of the geoethics case; and the nature of the case studies. These topics are important because they can be used to frame important discussions about the nature of demand-side protection.

Geoethics cases are natural and social disasters that involve the consideration of stories, models, facts, ethics, dilemmas, and outcomes. These are recent episodes of case studies.
